Plant Quality Certified Seed

Certified seed is a guarantee for variety identity, germination, and purity. Contact your local seed producer or dealer for quality certified seed.

Seed producers or dealers can be found in the North Dakota Field Inspected Seeds Directory. The directory is available from the North Dakota State Seed Department (NDSSD), North Dakota Crop Improvement & Seed Association, your local county agent, or under the field seeds program of the NDSSD website. [www.state.nd.us/seed/](http://www.state.nd.us/seed/)

Varieties protected under PVPA with Title V option can only be sold as a certified class of seed. It is the responsibility of the buyer and/or seller to confirm the PVP status of a specific crop variety prior to buying or selling the variety. PVP status information can be obtained from the ND State Seed Department.

Other HRSW varieties released by the North Dakota Agricultural Experiment Station:

**Steele-ND** – (2004) High yield, great quality, and some scab resistance provided by a source different from Alsen.

**Dapps** – (2003) Exceptionally high grain protein with superb milling and baking characteristics and good yield.

**Alsen** – (2000) Tolerance to scab, good yield and standability with excellent milling and baking qualities.

**Reeder** – (1999) Exceptional yield, especially in the west, with good quality and great standability.

Glenn was developed by the NDSU hard red spring wheat (HRSW) breeding program and released by the North Dakota Agricultural Experiment Station in the spring of 2005. Glenn was selected from the progeny of the cross: ND2831/Steele-ND. The experimental HRSW line ND2831 is a derivative of Sumai3 and has Fusarium head blight (scab) resistance similar to ‘Alsen.’ The objective of this cross was to combine the scab resistance sources of Alsen and Steele-ND, along with high yield, excellent quality, and standability into one package.

Data collected during the testing period indicate that Glenn provides scab resistance and yield potential superior to Alsen, along with improved standability, an improved leaf disease package, and equal or slightly better milling and baking quality.

The improved scab resistance and yield advantage of Glenn is especially evident in areas where disease pressure is high (i.e. Eastern North Dakota). Glenn also exhibits exceptionally high test weight. Glenn appears to have the potential to provide producers with an alternative for ‘Alsen’.

For additional information about Glenn and other HRSW varieties, refer to the most recent Spring Wheat Variety Selection Guide (www.ext.nodak.edu/extpubs/plantsci/smgrains/a574w.htm) or contact the HRSW breeder at (701) 231-8478 or extension agronomist at (701) 231-7971.

### Glenn

**General Characteristics**

- Scab resistance, yield, and straw strength superior to ‘Alsen’
- High protein and very good milling and baking characteristics
- Extremely high test weight
- Conventional height, awned variety with heading date similar to ‘Alsen’
